## **01 Why neuroscience and learning are good companions 1**

Do you know...? 1

Your invitation to come on a journey 1

Who you are as the reader 3

Why this book has been written now 5

The reasons I'm interested in the neuroscience of learning 6

The definition of neuroscience for this book 8

What you'll find on this journey 8

A start on the 'How can I...?' 11

So what? – takeaway ideas to experiment with 12

How to navigate this book 12

Summary 13

References and further reading 14

## **02 The science of your brain 15**

When was your last eureka moment? 15

Building blocks 16

What's the structure? 19

The brain's messengers – neurotransmitters and hormones 23

What else is going on in your brain? 25

What are some of the tools of neuroscience? 26

Other definitions 28

So what? – takeaway 29

Summary 31

References and further reading 32

## **03 What to do when someone says 'neuroscience says...' 33**

Sometimes things aren't all they seem 33

Overview 34

What you'll cover in this chapter 34

- Perils of research 35
- Six questions to ask when someone says ‘research shows’ 43
- Summary 47
- References and further reading 48

## **04 The science of learning 49**

- Thinking about yourself whilst learning can inhibit your performance 49
- Overview 50
- What learning isn’t 51
- What learning is 52
- Some of the biology that’s useful 53
- Types of learning 59
- Working with a model of learning 65
- Summary 69
- References and further reading 69

## **05 Motivating learners from curiosity to persistence 71**

- ‘When you’re smiling...’ 71
- Motivated learners 72
- Brain states 73
- More practical steps to motivation 85
- Other influences on people’s beliefs about learning – negative and positive 85
- Motivating yourself 87
- Summary 88
- References and further reading 88

## **06 Use your sense: Getting information from the outside world and into your head 91**

- Learning through your senses 91
- Real-world challenges 94
- How the senses work 95
- Summary 112
- References and further reading 112

- 07 Attention, learning and why Goldilocks deserves recognition 114**
- Look over there! 114
  - What attention is and why you need it in learning 115
  - System of attention 115
  - Attention span 116
  - Attention from inside and outside 117
  - Paralysis by presentation 126
  - Summary 127
  - References and further reading 128
- 08 Making learning meaningful and valuing intelligence 129**
- Beautiful mathematics 129
  - The disruptive element in the classroom 130
  - Intelligence and learning 131
  - Summary 146
  - References and further reading 147
- 09 Meaningful memories: From encoding to forgetting 149**
- I've never met you before – have I? 149
  - What is memory? 150
  - Types of memories 151
  - How you process memories 152
  - How to help your learners remember 160
  - Summary 166
  - References and further reading 167
- 10 Testing, experimenting, habits and practice 169**
- Punish the correct answer 169
  - Why it's important to test, experiment and practise whilst learning 170
  - How to test 176
  - Why sometimes testing gets in the way of learning 181
  - Tests of learning 182
  - Summary 183
  - References and further reading 184

**11 Review and reflect: Getting rid of the magic wand 185**

- The Truly Terrible Training Course 185
- Why you need to review – what it feels like when you don't 186
- Reviewing – the story of a beautiful relationship 187
- How to build the relationship 190
- How and when to review learning 195
- Who to involve 198
- Top Tips 200
- Summary 200
- References and further reading 201

**12 Stickier stories and food for thought 202**

- What you'll cover in this chapter 203
- Stickier stories 203
- Language and learning 208
- Whilst we're talking about the environment 215
- Being exploratory, playful and experimental 217
- Musically speaking 219
- Summary 219
- References and further reading 220

**13 Sleep and learning 221**

- A dangerous activity 221
- Overview – what you'll cover 221
- What is sleep? 222
- Stages of sleep 223
- Anatomy of sleep 227
- Chemistry of sleep 228
- Lack of sleep and learning 231
- Common challenges 234
- What can you do? 237
- Summary 239
- References and further reading 240

**14 Your brain and digital learning 241**

- The curious worlds of digital and learning 241
- What's coming up? 242
- What is digital learning? 242

Does digital learning affect our brains?	244
Digital social learning	248
Virtual reality learning – how real is it?	250
Features of the digital world that don't help learning	252
More features of the digital world that help learning	255
Top trumps for designing and delivering in a digital world	258
Summary	259
References and further reading	260

## **15 The future is already with us 263**

Mindfulness	263
Overview	264
The quantum brain	264
Computational neuroscience	265
Taking pills to make you smarter	266
Summary	268
References and further reading	268

## **16 The end of this journey and the start of more 270**

Managing tube journeys	270
What you'll find in this final chapter	271
A race through a review	271
Some challenges of embracing neuroscience into your practice	272
Benefits of applying practical ideas from neuroscience	277
Top ideas to take away	279
Your call to action	282
The end of this particular journey	282
Summary	283
References and further reading	284

*Answers to questions in Chapter 9* 285

*Index* 286
